

How-to doc

The FireAwareness is a ios application about the 911 call simulation, it allows kids do the 911 phone call practice.

A Youtube video link for application instructions:

https://www.youtube.com/watch?v=hoZKDaVU_Hg&feature=youtu.be

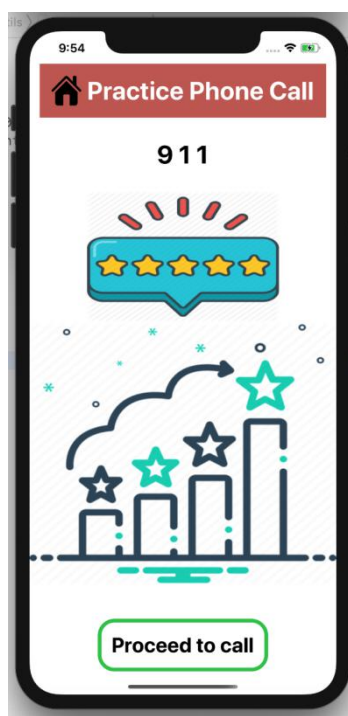

This is homepage for the application, there are four buttons can be tapped. Only the practice phone call section work well. The other functions of application is still in the developing. So, user can click the practice phone call button to start do 911 simulation.

After clicking the practice phone call button, it will go to this page that is allowed user to practice calling the emergency number 911. Also, the application has help mode which is only allowed user to press 9 and 1.

After the user input correct number, it will give the positive feedback and a button at bottom that to calling simulation part.

If the user input incorrect number, it also shows feedback to tell the user what wrong with the input. The try again button will lead to preview page to ask for input the emergency number.

Additionally, there is button at bottom which will go to right page. That page shows calling instruction to user.

At the simulation part, it's allowed user to slide the word at bottom to change the questions. So, user can pretend to have communication with firefighter.
